ORCHESTRA MAX

Enhanced Waterproofing

ORCHESTRA MAX

Enhanced Waterproofing

Introducing the awning fabric that will revolutionise your terrace!

DICKSON awning fabrics come with LOTS OF GUARANTEES:

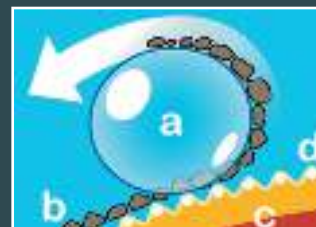

- glare reduction of up to 95%,
- depending on the colour, between 90 and 100% of UV radiation blocked out,
- a source of shade that will help to limit the greenhouse effect on your terrace,
- colours impregnated into the very heart of the fibre: all of our yarn is solution-dyed, guaranteeing maximum colour-fastness under the effects of UV rays,
- an attractive façade, an awning enhances your property!

Why choose Orchestra Max self-cleaning fabric for your awning?

- It is easy to maintain. Mimicking the lotus plant - the leaves of which never absorb moisture or accumulate dirt - PERMACLEAN treatment gives awning fabrics latest generation technical properties. Dirt or drops of water do not stick to its surface, while rain or a simple rinse in fresh water are all that's needed to clean the fabric.
- It is water resistant. Coated on one side with a UV-resistant, anti-fungal acrylic resin (which prevents the build-up of mould), Orchestra Max fabric absorbs neither water nor pollution, enabling its owner to take full advantage of their terrace, without having to roll up the awning at the first sign of rain.
- It is manufactured to meet all of the demands placed on it by awning professionals... Orchestra Max fabric is particularly suitable for permanent installations in which, in addition to pollution, an awning is likely to be exposed to a range of climatic conditions.

... and for the most demanding of home owners.

PERMACLEAN self-cleaning treatment: technology, inspired by nature.

Without any Permaclean finish:

- a. Rolling water droplet
- b. Dirt
- c. Fabric

> Dirt is not carried away by the water

With a Permaclean finish:

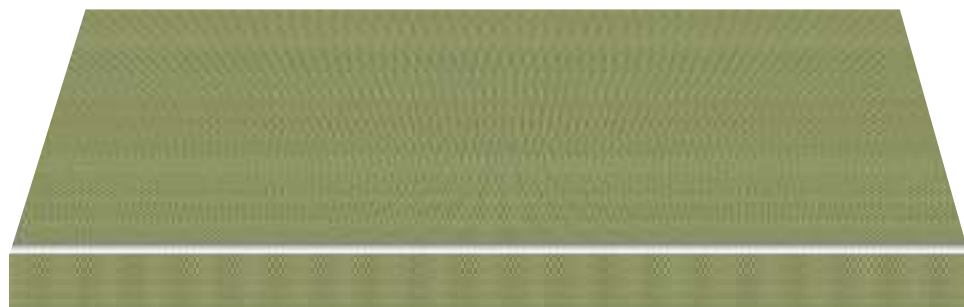

- a. Rolling water droplet
- b. Dirt
- c. Fabric
- d. Nano-particles

> Dirt is carried away by the water

The Orchestra Max fabric received the "Self-Cleaning, inspired by nature" certificate, delivered by the ITV laboratory in Denkendorf, Germany.
The tests performed to obtain this certificate rely on European standard and prove the full performance and efficiency of the new permaclean Self-cleaning treatment.

Pledge

Resistance to water

CLEANGARD treatment protects against any risk of 'pocketing' and soiling.

Avoiding greenhouse effects

Fabric by Dickson blocks out up to 95% of heat and glare.

Preserving Colours

SUNACRYL solution-dyed acrylic fibre protects colours (UV resistance rating of 7-8/8).

Insist on Dickson quality!

Dickson is the French textile brand par excellence when it comes to awning fabrics. Wherever you see the Dickson brand you can be sure of maximum quality and durability.

The acrylic fibre used in Dickson fabrics is solution-dyed so it:

- will not break down
- will stand up to the effects of UV radiation over the long term
- will remain unaffected by severe weather condition

Even when fully exposed to the light, colours retain their brilliance, year after year.

The fabric has also undergone a special treatment to make it exceptionally resistant to rain and to atmospheric pollution.

Quality like this enables us to guarantee your fabric for 5-10 years.
